BARE INTERNATIONAL ANALYSIS

Evaluation of Style Advisor Performance

Prepared By: Shubham Gadekar

---

1. Introduction

The objective of this project is to evaluate the performance of Style Advisors based on evaluation data collected during store visits. The dataset contains multiple records assessing various aspects of customer service, store environment, and advisor performance.

The analysis focuses on identifying high-performing regions, understanding performance trends over time, and highlighting areas where service improvement is required. Microsoft Excel was used to perform data analysis, create pivot tables, and generate visualizations for better insights.

---

2. Objectives

The key objectives of this project are:

- To classify Style Advisors into performance categories based on their evaluation scores.
- To analyze the average evaluation score across different zones.
- To identify which zone has the highest percentage of high-performing advisors.
- To visualize performance trends over time.
- To analyze performance across multiple evaluation criteria.
- To provide insights and recommendations to improve overall service performance.

---

3. Dataset Overview

The dataset contains evaluation records for Style Advisors based on store visits conducted by auditors. Each record represents a single evaluation event and includes various attributes describing the visit.

Important columns in the dataset include:

Evaluation_ID – Unique identifier for each evaluation record.
Evaluation_Date – The date when the evaluation was conducted.
Evaluation_Score – Overall score assigned during the evaluation.
Store Ambiance – Evaluation of the store's cleanliness, organization, and environment.
First Impressions – Initial impression created by the Style Advisor during the interaction.
Discovery – Ability of the advisor to understand the customer's needs.
Recommendations – Effectiveness of product recommendations provided.
Overall Assistance – Overall service quality delivered by the advisor.
Zone – Geographic region where the store is located.

---

4. Performance Grading

To evaluate advisor performance effectively, evaluation scores were categorized into four performance groups.

The grading criteria used in this analysis are:

High Performer – Score between 90 and 100
Average Performer – Score between 70 and 89
Low Performer – Score between 50 and 69
Bottom Performer – Score below 50

This classification allows the identification of top-performing advisors as well as those who may require additional training or improvement.

---

5. Average Evaluation Score by Zone

A pivot table analysis was performed to calculate the average evaluation score for each zone. This helps compare the overall service quality across different regions.

The analysis shows that the North zone recorded the highest average evaluation score, indicating stronger service performance compared to other regions. The South zone recorded comparatively lower average scores, suggesting that additional focus may be required to improve service quality in that region.

The overall average evaluation score across all evaluations was approximately 71.79.

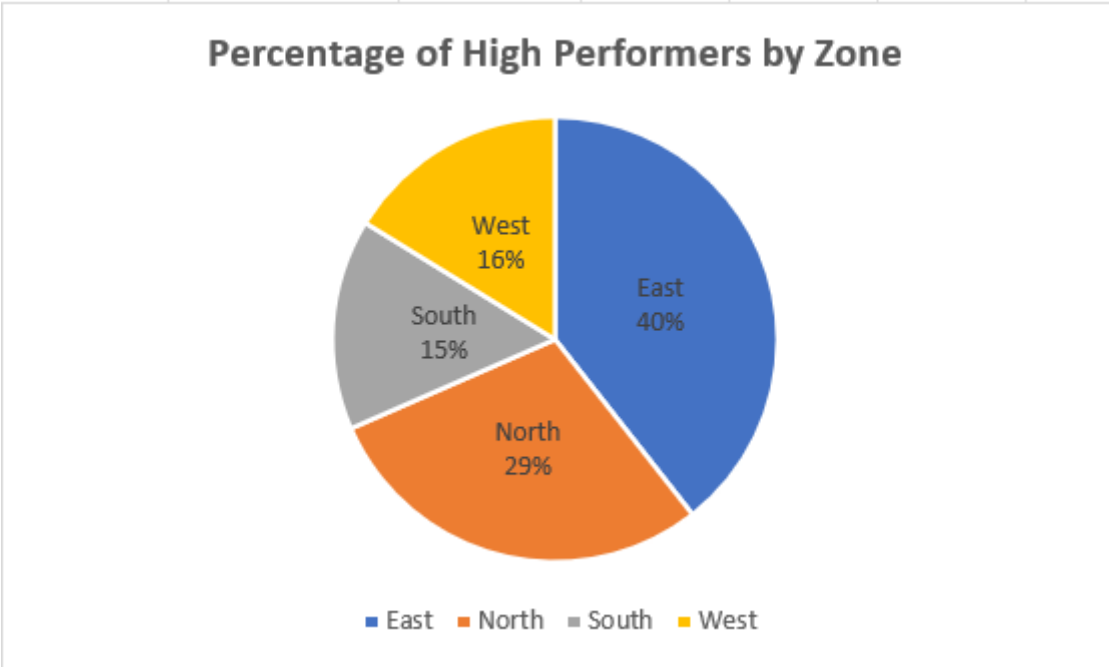
	East	North	South	West
Total	71.57	76.74	66.61	71.82

---

6. High Performer Distribution

Another analysis was conducted to determine the percentage distribution of high-performing Style Advisors across different zones.

The results indicate that the East zone contributes the highest share of high-performing advisors compared to other zones. This suggests that customer service quality in the East region is relatively stronger.

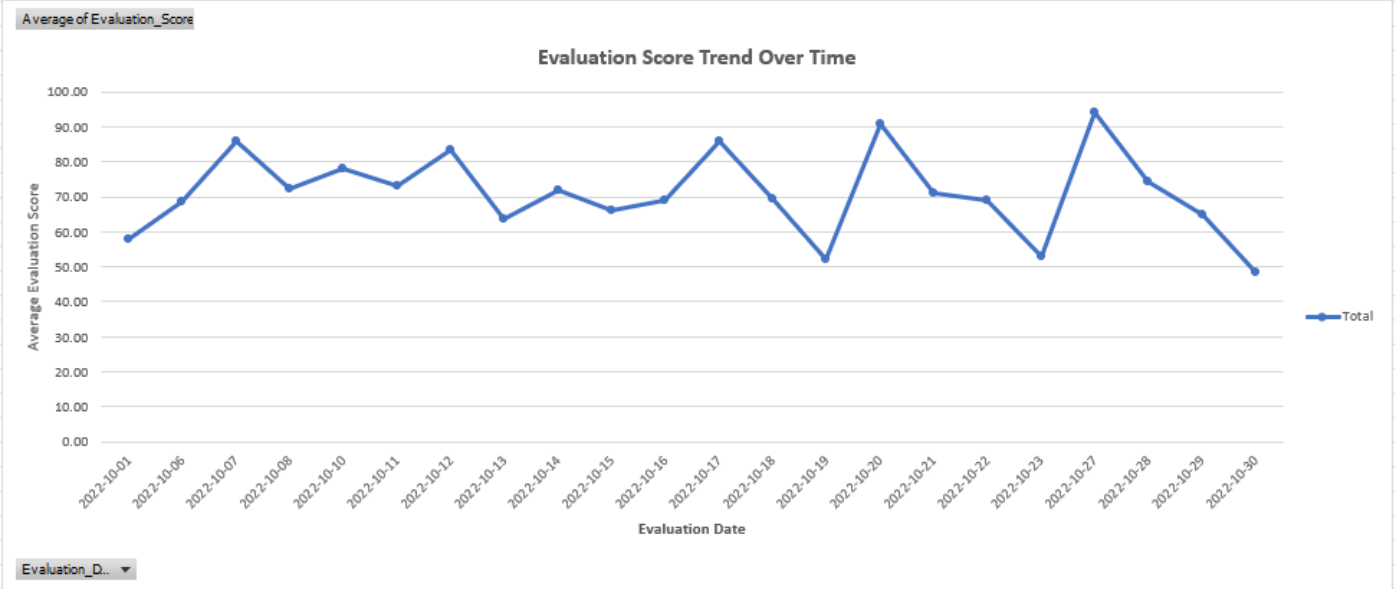


7. Performance Trend Over Time

A time-series analysis was conducted to observe how evaluation scores change over time. This was done using the evaluation date field.

The line chart shows that evaluation scores fluctuate across the observed period. The highest score was recorded on October 27 with a value close to 94, while the lowest score occurred on October 30 with a value around 48.33.

Despite these fluctuations, the overall average score remained around 71.79, indicating moderate service performance during the evaluation period.



8. Performance Breakdown by Evaluation Criteria

A heatmap analysis was created to evaluate performance across different service criteria.

The analysis shows that Store Ambiance consistently receives high scores across zones, indicating that stores maintain strong environmental and visual standards. However, the Overall Assistance rating shows comparatively lower scores in certain zones, highlighting opportunities to improve customer interaction and support.

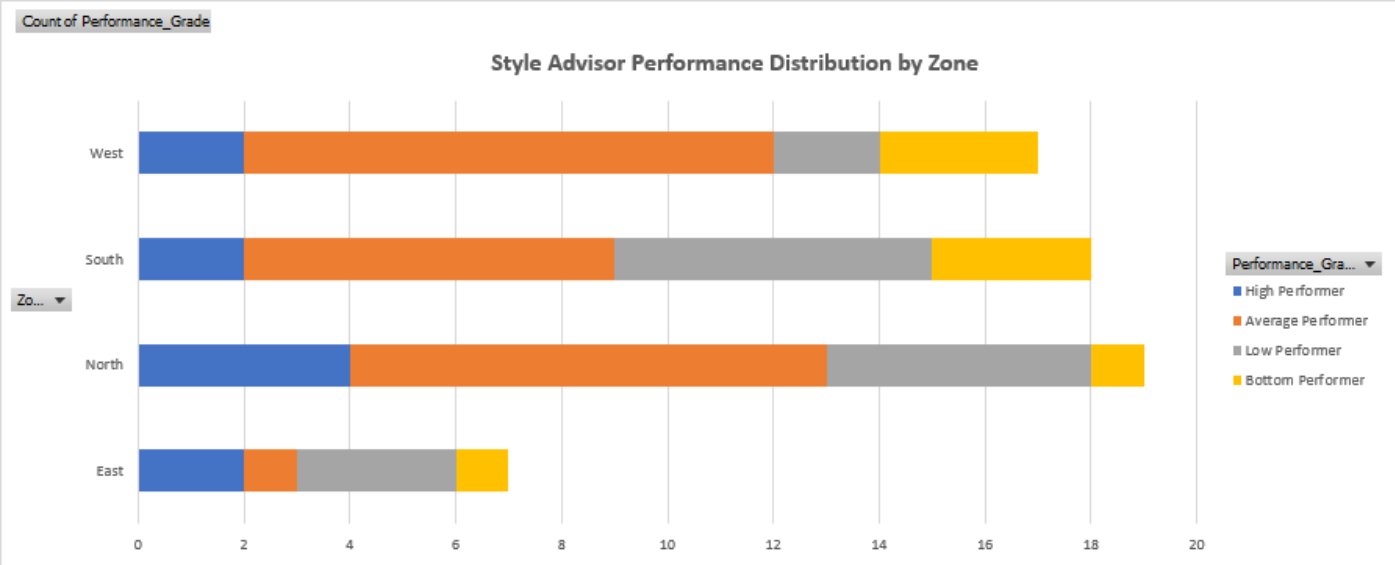
The heatmap helps quickly identify strong and weak areas of service performance.

Row Labels	Avg Store Ambiance	Avg First Impression	Avg DISCOVERY	Avg RECOMMENDATION	Avg Overall Assistance
East	90.57	81.71	45.71	71.29	6.57
North	93.05	82.32	80.00	63.16	8.37
South	86.56	81.00	62.22	53.67	7.83
West	85.76	84.94	68.24	58.82	7.29
Grand Total	**88.82**	**82.59**	**67.54**	**60.08**	**7.70**

9. Performance Category Distribution

A stacked bar chart was created to compare the distribution of performance categories across zones.

The results show that North and West zones have a higher number of average performers, indicating consistent service quality. South zone shows a relatively higher number of low performers, suggesting that additional training or operational improvements may be beneficial in that region.



10.Key Insights

The analysis revealed several important insights:

North zone demonstrates the strongest overall evaluation performance. East zone contributes the highest proportion of high-performing advisors. Store Ambiance consistently receives strong evaluation scores across all zones. Overall Assistance ratings are comparatively lower in some regions. Performance scores fluctuate over time, indicating varying customer service experiences.

11.Recommendations

Based on the findings, the following recommendations are suggested:

Provide targeted training programs to improve customer interaction and assistance skills. Encourage best practices from high-performing zones to be implemented in other regions. Focus on improving discovery and recommendation techniques during customer interactions. Monitor performance regularly to maintain consistent service quality.

12.Conclusion

This project provides a comprehensive analysis of Style Advisor performance using evaluation data. By applying data analysis techniques and visualizations, meaningful insights were generated regarding regional performance differences and service quality trends.

The findings highlight both strengths and areas that require improvement. Implementing the recommended strategies can help improve customer experience and enhance overall service performance across all zones.
